IF YOU AINT CAV...

## Your Stetson/Resistol Hat Fit

For the hat that will hold up the best, hat manufacturers use an "X" rating. This determines the amount of animal felt used to make the hat. The higher the "X" rating, the better quality of hat (ex. 2X, 3X, 4X, etc.) The actual Cavalry Stetson is a 3X hat. For your size, your hat should fit snug, not tight, and it should sit level across your forehead, with approximately an inch (2.5-cm) above your eyebrows and a finger width above your ears.

### Getting the right size

When selecting your hat size, measuring your head will provide the most accurate results. Don't use your patrol cap, beret, ICH, ball cap, or beanie as a reference. Different hat manufacturers result in slightly different sizes, just like with shoes.

To find your size, hold a cloth tape measure just above your ear. Wrap the tape measure around your head and across your forehead—make it tight (snug), but not uncomfortable. If you don't have a flexible tape measure, you can use a piece of string, then measure the length against a ruler. The fit of your hat is only as good as the measurement that you provide us with, so ensure that your measurement is accurate—measure twice!

If you are uncertain about the exact size or if you are between sizes, we recommend that you go with the next size up, as the hat sizes tend to run large. Hats that are too tight can be stretched (try one of our Hat Stretchers). We also carry sizing tape and removable hat inserts to adjust hats that are too big.

For the best looking hat for your head, we suggest that the crown of your hat is the same height (brim to top of crown) as your face (brim to bottom of chin) and the brim width be proportional to your face width. People of average to large body types can wear 3 1/2" to 4" brims while smaller body types should consider wearing hats with brims of 3" to 3 1/2".

IF YOU AIN'T CAV..

## Your Milano Hat Fit

You may have found that when buying boots or shoes, you wear different sizes in different brands, or the same size and style boot made by one company fits different from a boot made by another company. Similarly, you may find that a size 7 hat from another manufacturer will fit differently than a hat of the same size from Milano Hat Company, Inc. These variations are caused by differences in manufacturing methods and equipment.

### Getting the right size

When selecting your hat size, measuring your head will provide the most accurate results. Don't use your patrol cap, beret, ICH, ball cap, or beanie as a reference. For your size, your hat should fit snug, not tight, and it should sit level across your forehead, with approximately an inch (2.5-cm) above your eyebrows and a finger width above your ears.

You can figure your hat size by measuring around your head with a cloth tape measure. Just place the tape around your head, making sure it is about an inch or so above your eyebrows and goes around your head where a hat would settle. Take the measurement in inches to the 1/8th of an inch (or to the closest in centimeters) and convert it to your head size using the chart below.

Don't try to determine your hat size by measuring the inside of your hat. This would result in your new hat being too small. If you are uncertain about the exact size or if you are between sizes, Milano recommends that you go with the next size up. Hats that are too tight can be stretched (with one of our Hat Jack hat stretchers). We offer sizing tape and removable hat inserts to adjust hats that are too big.
